Inline Namespaces Exercises

Nested namespaces

- What is meant by a "nested namespace"?
- Write a simple program which defines a nested namespace
- Inside the nested namespace, define a symbol
- Access this symbol from main()

Inline namespaces

- What is meant by an "inline namespace"?

- Write the same program as in the last exercise, but this time using an inline namespace instead of a nested namespace

Inline namespaces and versioning

- Give an example where inline namespaces are useful
- Write a simple program to illustrate your answer
